- Get unlimited profile for **$9 USD/ month/ tablet**

Cognitive functions

LEXICAL MEMORY

Lexical memory is the abilty to associate words with objects and remembering hteir names.

We often use lexical memory in order to remember words someone just said to us to be able to follow the conversation.

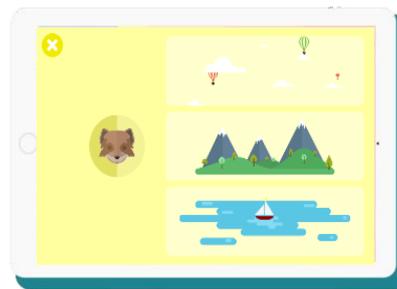

GRANNY COOKS

Here the senior has to remember steps of recipe of the ingredients composing it after having read it.
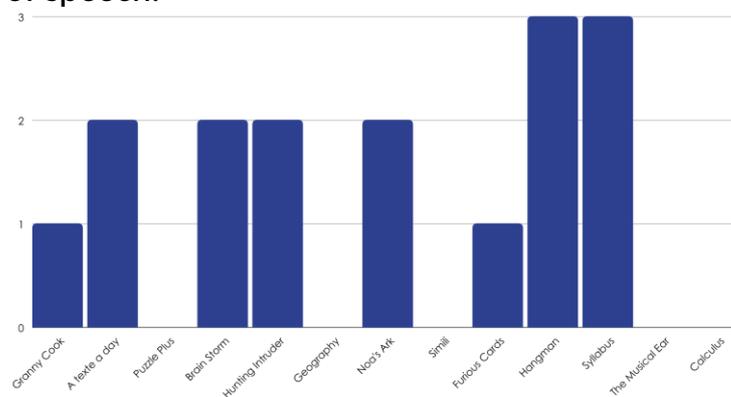

SIMILI

The senior has to find the image that appears twice on the screen.

You can ask them to name the object on the image aloud.

VERBAL FLUENCY

Verbal fluency is the ability to utter organized sentences (subject, verbs and complements), as well as the abilty to create complex sentences.
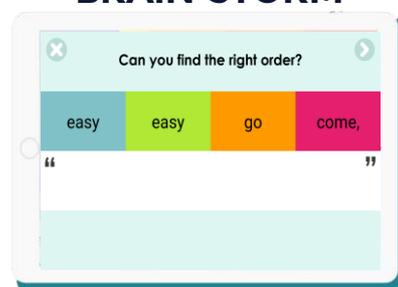

Plus, it influences rythm of speech.

A TEXT A DAY

The senior will be able to read a new excerpt of a text each day.

Overtime, you will be able to see their reading skills improve.

BRAIN STORM

The senior has to find the order of the words to make up famous proverbs.
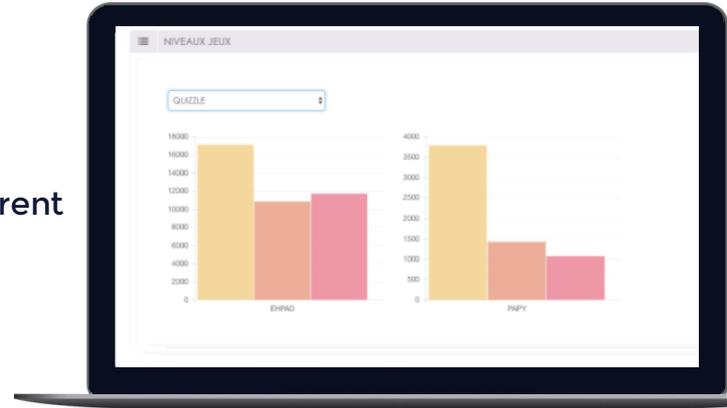

Monitoring platform
(optional) - $38/month

Each professional has access to their patients' statistics at a global and individual user level.

You may :

▶ Review the improvement and progress of each person's usage (favorite games, success rate, current difficulty level).
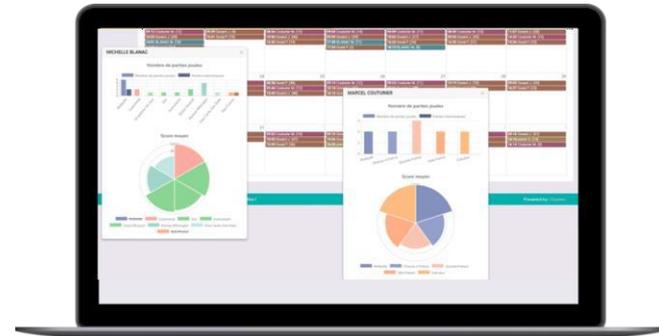

▶ Monitor the well-being of each user.

WELL-BEING PROGRESS AND TRENDS

▶ Monthly history

▶ Details for the current month

CALENDAR

This feature allows you to better track the people you care for.

You will have access to the results on a daily, weekly or monthly basis, and follow the evolution by player (number of games played, average score per game etc...).
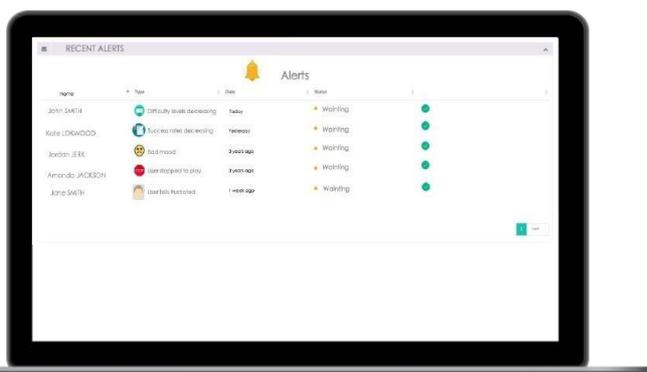

ALERTS

This feature allows you to identify in real time the users who are experiencing difficulty.

Different types of alerts have been developed in collaboration with our health partners :

▶ Well-being alert
▶ Lack of activities alert
▶ Lower cognitive performance alert

You can then go directly into the user's profile for more information on how best to assist the senior
