The first of its kind – the OmniFlow™ enhances breathing exercises like never before! The OmniFlow™ system combines an airflow sensor with a state-of-the-art virtual environment to create an interactive exercise experience for your patients. Valuable objective data assists therapists in treatment planning and improves patient outcomes. As clinical care teams continue to treat patients with challenging cardiopulmonary conditions, the OmniFlow™ provides a solution to help improve functional gains during a patient’s length of stay. This improved functionality can lead to increased daily activity levels and ultimately help reduce recidivism.

**The OmniFlow™ helps address patients with conditions that include primary or underlying respiratory issues impacting their ability to breathe and function:**

- Cardiopulmonary disorders
- Dysphagia
- Neurological conditions
- Orthopedic conditions
- Post-surgical debility
- Inflammatory/degenerative diseases
- Stress or urge urinary incontinence
- Acute or chronic infirmity

**UNIQUE FEATURES:**

- OmniFlow™ respiratory exercise software
- USB-connected airflow sensor
- Measureable data for inspiratory/expiratory power and rhythmic breathing
- Small footprint
- Intuitive touchscreen interface
- Unique patient programming for customized treatment
Achieve optimal respiratory function by safely treating each individual with single-use breathing sensors and patient-specific parameter adjustments.

ACP’s Evidence-Based Clinical Programs

Our customizable evidence-based programs combine innovative technologies like the OmniFlow™ with customized clinical protocols and pathways, advanced therapist training and on-going support by ACP’s physical and occupational therapists to ensure you achieve better outcomes for your patients in the most efficient way.

Disposible components
- Simplified infection control
  - Single-use Spirette and viral filter
  - Barrier film
  - Laptop cover

USB-connected airflow sensor
Accurate detection of inhaled/exhaled air volume and flow

Respiratory exercise software
Virtual breathing exercises and patient data management

Patient management
Efficient set-up and treatment

Customizable programming
Patient-specific exercise and parameter selection

Outcomes measurement
Objective measures to guide treatment and show progress
